

**SafeGuard**  
ALUMINIUM BI-FOLD

# Invite The Outside In with the SafeGuard Bi-Fold Door

**Our SafeGuard Bi-Fold doors have been designed and extruded in Great Britain and are manufactured to exacting standards in our own dedicated manufacturing facility. This attractively crafted door is made from premium grade aluminium which is expertly finished to the highest standards.**

A Bi-Fold door can enhance any home, from a period property to a modern design and build project. Its guaranteed to change the way you view the outside world, all year round.

## **OPENING UP THE OUTSIDE WORLD**

With the doors fully opened the boundary between inside and out becomes blurred and the true benefit of the door is experienced especially on those warm summer evenings.

To ensure maximum weathering performance we recommend an outward opening configuration using our standard weathered threshold. Although this requires a small step over, the threshold can easily be set down to enable a more seamless link.

Our Bi-Fold doors can also be used as an internal room divider using the specially designed level access bottom track. This non weathered tracking is ideal for use between rooms and conservatories.

Please seek advice from your installer as to the most suitable threshold for your location.

## SafeGUARD ALUMINIUM BI-FOLD

### Security

**All our SafeGuard B-Fold doors are fitted with multi point locking hook bolts to any external access door and secure shoot bolt locking to the travelling doors.**

Where external access is required a 3 Star Diamond rated Ultion cylinder is fitted as standard offering the highest resistance to external attack. These combined with a strong aluminium profile ensures an **ultra secure product**.

### Colour

**Our most popular range of standard colours are :  
WHITE EXTERNALLY AND WHITE INTERNALLY,  
ANTHRACITE GREY EXTERNALLY & WHITE INTERNALLY,  
ANTHRACITE GREY EXTERNALLY & ANTHRACITE  
GREY INTERNALLY.**

The white has a robust gloss finish as standard whilst the Anthracite Grey has a unique textured designer finish.

More colours are available but require substantially longer lead times. Ask your installer for more details.

### Design

**All our Bi-Fold doors are custom built to suit a wide range of installations** and with standard designs ranging from two through to six doors and from 1.6m - 6m approximately there is a configuration to please everyone. Please ask your installer for advice on the best configuration for you.

## Operation

**Great care has been taken to ensure the SafeGuard Bi Fold door is easy and safe to use.**

Its high quality rollers have been engineered to offer a smooth effortless glide over the seamless track.

## Thermal Efficiency

**Specifically designed to meet the demands of the British climate and the ever demanding requirements of the current British Building Regulations the SafeGuard Bi-Fold door gives superior all year round performance.**

Whilst the doors offer maximum natural light when combined with thermally efficient glazing and advanced glazing seals its overall thermal performance is of the highest standards.

## Low Maintenance

**One of the beauties of a SafeGuard Bi-Fold door is it has been manufactured to last and is easy to maintain. Its marine grade paint finish has been applied to last for years to come.**

Dependent upon location it is recommended to wash down the external finish with warm soapy water at least twice a year to remove external environmental pollutants.

It is also useful to regularly remove any debris build up from within the upper and lower tracks. A light spray with silicone once a year on the tracks is also recommended.

The locking mechanisms should be cleaned once a year and a light application of machine oil to the moving parts is recommended to maintain the smooth locking action.
